

JavaScript is Single-Threaded:

JavaScript is often referred to as a "single-threaded" language because it primarily runs code sequentially, one piece at a time, in a single execution thread. This means it processes one task before moving on to the next, which can be compared to a single lane on a road where cars (tasks) follow one another.

In conclusion, JavaScript's single-threaded nature isn't a limitation, but a strength. It's the foundation of its success in web development.

AI companies list in Egypt:

1-ABM Egypt: NLP ,social media analysis.

2-adam.ai: NLP,machine learning,embedded system.

3-Agolo: NLP,ML,DL

4-halan: Data analysis, data science

5- iHub: MI

6-in touch: ML,DL

7-Kazyon: Data science,MI

8-orange: ML,data analysis,Big data

9-Rology :computer vision,MI ,image processing

10-smarteye.se : ML, computer vision
